

Tips to improve your diagnostic accuracy

Keep your knowledge and skills up-to-date

Integrate case-based learning into your daily activities.

Complete the picture

Draw information from multiple sources (patient history, examination and tests).

Think critically and self-reflect

Challenge your initial diagnosis and carefully consider conflicting information.

Be aware of biases

Recognize and address unconscious influences and preconceptions in your decision-making.

Consult peers

Seek a second opinion on your decisions and leverage technology.

Improve continuously

Seek feedback from colleagues and patients to improve your decision making.

**Get it right,
make it safe!**
